

AVENGER 3

- HIGH BROWN PATCH RESISTANCE
- HIGH QUALITY IN MULTIPLE CLIMATES
- DARK GREEN FALL & COLOR
- SHADE TOLERANCE

PUSHING THE LIMITS FOR TALL FESCUE ADAPTATION

Avenger 3 (PPG-TF 308) pushes the boundaries of Tall fescue versatility, adapting to both high heat and extreme cold climates.

Avenger 3 excels with Brown Patch resistance and scored in the top percentage for Shade Tolerance. Avenger 3 continues the Avenger family line's heritage of select performance for all turfgrass areas.

Make Avenger 3 the choice for blends and mixtures everywhere!

SEEDING AND OVERSEEDING Tall fescue prefers warmer soil for germination, typically 55°F to 58°F. In the Transition zone this means early spring and early fall. Further north, late spring and late summer is preferred. Avenger 3 should be sown at a rate of 6 to 9 lbs per 1000 sq ft (275 to 400 lbs per acre), lightly covered with soil, and kept moist until after the first cutting. Maximum density is achieved by planting with a slicer/seeder or following aerification, and with the application of a starter fertilizer. First mowing's are generally within three weeks, or when plants first reach 3 inches in height. Overseed existing tall fescue at a rate of 225 to 300 lbs per acre.

AUTHORIZED DEALER

MAINTENANCE Avenger 3's natural dark color, density, and pest resistance minimize the need for extensive maintenance. Generally 2 to 3 pounds of nitrogen as part of a balanced fertilizer applied annually is all that's required. Cutting heights should range between 2 to 3 inches. Under controlled conditions heights down to 1 inch can be satisfactorily maintained.
