Here are two of my go to loaded push exercises. These can both be done with a DB or a KB or brick, water bottles, chairs..! The DB will be slightly easier and more stable to use as you push through the centre of mass (COM), potentially a better place to start. When you push the KB, your force goes outside of the COM decreasing stability, and increasing the technical execution needed to do this exercise well. Use what you have, both will benefit your PUSH muscles (shoulders, triceps, pecs) and more 💪.
