DIRECTIONS: Ingredients marked with an asterisk can be purchased from any supplier. Ensure all equipment is cleaned and sanitized. Wear proper safety equipment, including gloves and protective eye wear.

Assemble double boiler and place item 1 in the top pot. Begin heating to 175°F/80°C. While heating, add ingredients 2-3 in the small container and mix together into a slurry. When homogenous, add slurry to main vessel and use an immersion blender to disperse. When homogenous and mixture is at temperature, add Brazil Clays Red Earth and mix until homogenous, using immersion blender.

In a microwave safe bowl, add ingredients 5-9 and gently heat in 1 minute increments, until everything is dissolved and mixture is 175°F/80°C. Do not heat for several minutes at a time or leave mixture unattended in microwave.

When at temperature, pour mixture into double boiler and mix using the immersion blender for a few moments, until smooth. Remove from heat and begin cooling.

Below 110°F/45°C, at the remaining ingredients, gently mixing with a spoon in between each addition. Pour into desired containers.
