DIRECTIONS:

Ingredients marked with an asterisk can be purchased from any supplier. Prepare a double boiler with water in the bottom pan and add ingredients 1-5 to the pan. Begin heating to 175°F. When at temperature and mixture is completely melted, add Brazil Clays Gold Earth and disperse using an immersion blender.

Turn off heat and cool to 150°F with gentle stirring. Add remaining ingredients one-by-one. Prepare your silicone mold. Before pouring mixture into the mold at 150°F, give it a good stir with the immersion blend to ensure clay is dispersed. Pour into mold and allow to solidify.
