DIRECTIONS: Ensure all equipment is clean and sterilized. Ingredients marked with an asterisk can be purchased from any supplier.

Add Distilled or Deionized Water to the main mixing vessel. In a small mixing bowl, add Organic Glycerin and Xanthan Gum together in a slurry. Mix by hand with a spoon until it looks homogenous. Pour the slurry into the main mixing vessel and use an immersion blender to fully disperse the mixture.

Once homogenous, add Natural Emulsifier 146 and stir using the immersion blender until no white particles remain. It may take up to ten minutes and the side of the mixing glass may need to be scraped to get any emulsifier off the sides.

Once the emulsifier is fully dissolved, add ingredients 5-8, one by one, mixing with each addition. You may want to use the immersion blender to add the Watermelon Seed Oil.

Pour into your desired container and enjoy!
