

Vitassium®

Dear Recognized Provider:

I'd like to take this opportunity to introduce you to Vitassium. Specifically formulated to support people living with chronic illness, Vitassium provides sodium and potassium to help manage symptoms of certain types of dysautonomia, including Postural Orthostatic Tachycardia Syndrome (POTS), Vasovagal Syncope, and Orthostatic Hypotension (OH), as well as other chronic conditions. Currently, Vitassium is available in salt capsules, chewable flavored tablets ("FastChews"), and ready-to-mix powder ("DrinkMix").

I am writing today, because you have been identified by a patient or client to our team as a provider who may be interested as a potential partner for the Vitassium Provider Program. Through the Vitassium Provider Program, Vitassium donates FREE sample packets of our Capsules, FastChews, and DrinkMix, along with educational materials, to qualified providers.

Why Vitassium?

Vitassium does not require a prescription for patients or clients. Unlike most other electrolyte options, Vitassium is classified as a medical food, meaning it is formulated for the specific dietary management of certain diseases or conditions that can benefit from increased salt intake. Vitassium products are designed to be kind to sensitive stomachs, and they do not contain any of the 9 FDA-identified food allergens, gluten, preservatives, artificial dyes, or GMO ingredients. Salt capsules contain 250mg of sodium per capsule, FastChews contain 125mg of sodium per two tablets, and DrinkMix contains 500mg of sodium per serving.

Since our start in 2016, Vitassium has donated a portion of our proceeds each year to help support Dysautonomia International. As of 2023, we are also proud supporters of the Ehlers Danlos Society, the Long COVID Alliance, the Sjogren's Foundation, and other patient advocacy groups.

If you have additional questions about our products, ingredients, consumption recommendations, or anything else, please feel free to visit our website, scan the QR code below, or contact us directly.

Thank you for your time.

Capsules
500mg sodium | 100mg potassium
per serving

DrinkMix
500mg sodium | 100mg potassium
per serving

FastChews®
125mg sodium | 25mg potassium
per serving

Why do Vitassium FastChews have less sodium than our other products?

We designed FastChews to provide a quick boost of electrolytes when patients are feeling symptomatic. Because they're chewed instead of swallowed, the electrolytes in FastChews can be absorbed up to 2-4x faster through the lining of the mouth, compared to most electrolyte products. They're meant to be used in conjunction with our Capsules and DrinkMix, but not replace them.
