

AUTOMATIC NOZZLES

sales@protekfire.com.tw
www.protekfire.com.tw

Style 323

- Automatically adjusts to fluctuating water flow to maintain effective pressure and a consistent stream in all flow ranges
- Adjustable from straight stream to fog pattern
- Nozzle flushes easily without shutting down and provides constant flow in either fog or straight stream
- Flow pattern detents facilitate positive positioning and smooth action
- Extensive range of flow settings
- Slide valve control changes flow setting without affecting stream quality
- Hardcoat anodized alloy construction
- Moulded rubber bumper with fixed fog teeth
- Suitable for foam application and compatible with Protek's foam aeration tubes

Specification
