

Digta 7 PREMIUM

DICTATION REINVENTED

Easy Mode
●●●

XXL DISPLAY

The display is especially big, clear, and very readable - even in the glare of direct sunlight. In its "Easy Mode" setting, it's streamlined to its most essential functions.

SHOCK-ABSORBING HOUSING

The Soft Touch housing is known for its high-quality, ergonomic design. It's also extremely robust and shock-absorbing, while resting easily and slip-free in the hand.

LITHIUM-ION RECHARGEABLE BATTERY

You can work significantly longer with this efficient lithium-ion rechargeable battery. And the Digta 7 can be operated using standard batteries as well.

SPEECH RECOGNITION FOR DICTATION ID

With the button above the slide switch, Nuance VoCon® Speech Recognition starts up, ready for receiving the dictation title. Speak naturally, even when reciting multi-digit file codes or patient ID numbers.

DUAL MICROPHONE TECHNOLOGY

Two microphones provide for fantastic audio quality. With the two-channel audio (WAV/MP3 recording) you're all set for interviews, conferences, and other recording needs.

MOVEMENT SENSOR

Especially convenient for left-handed users: Display rotation thanks to the movement sensor which also makes for automatic file storage in case the device should fall to the ground. This mode also ensures that the Digta 7 exits the sleep mode as soon as you pick it up.

SLIDE SWITCH WITH TOUCH PIN

The Digta 7 has a slide switch with a "Touch Pin". The pin only protrudes when the switch is set on "Stop". This way, you can dictate with your eyes closed; you'll clearly feel if the switch is set on Record or Pause. Plus, the slide switch can be configured to meet your dictation style, set for the functions you need most - making it especially practical for beginners.

DOCKING STATION DIGTA STATION 447 PLUS

With its timelessly elegant design, the Digta 7 Premium is an eye-catcher on your desk. As it rests in the Digta Station 447 Plus docking station, your dictations can be transferred to your PC, quickly and easily. Meanwhile, your rechargeable battery is getting recharged during every dictation break. A second rechargeable battery can be recharged separately in the docking station. Connect the foot control for hands-free dictation; add a headset, and together with the Digta 7 the docking station can be used as a complete transcription station.

**ALTERNATELY AVAILABLE
WITH BLUETOOTH**

DIGTA 7 PREMIUM BT WITH BLUETOOTH

The Bluetooth model makes it especially easy to transfer dictations on the go. You can connect your dictation device quickly and directly to your smartphone (Blackberry or Android Smartphone, for example) and send your dictations from there.
