- *(Certain exclusions apply, such as belts, filters, spark plugs, fuel injectors, fasteners, and hardware.)*

MAGNUSON PRODUCTS LLC  
**PRODUCT WARRANTIES**  
EFFECTIVE MARCH 18, 2022

**Coverage:** Magnuson's only obligation on all components and parts shall be to repair or replace a warranted component or part that it determines upon inspection to have a manufacturing defect determined by Magnuson to exist at the time the item was sold.

**V. Calibration and Warranty.** Magnuson Supercharger Systems are sold complete with Magnuson-supplied calibration that modifies the vehicle's stock PCM in order to accommodate the combustion and substantial power/torque changes a supercharger provides. In most instances, this calibration has been not only performance tested but also emissions tested together with the supercharger on a stock vehicle to establish that it complies with California Air Resources Board (CARB) emissions requirements and is entitled to receive a CARB Executive Order certifying that the product complies with those requirements and is "street legal" both in California and wherever EPA Clean Air Act regulations apply. A calibration that effectively captures the performance advantages of a supercharger and at the same time keeps the vehicle "street legal" alters the driving characteristics of the stock unsupercharged vehicle. Such alterations are normal and expected byproducts of the performance advantages of a supercharger. Magnuson warrants that Magnuson-supplied calibrations for a specified vehicle supercharger will provide increased vehicle power and torque substantially as advertised, and if a CARB EO for that vehicle has been procured, that the supercharged vehicle is emissions compliant per the terms of the EO. Customers who have registered their purchase using the form found [here](#) on Magnuson's website will be notified if calibration updates for their vehicle become available and upon request will be supplied with the updated calibration information.

NOTE TO CUSTOMERS WITH MODIFIED VEHICLES: The Magnuson calibration included with its kits is intended to work on stock vehicle configurations, including stock trim levels and stock OEM vehicle options. Modifications to your stock vehicle including, but not limited to, engine, flywheel, clutch, torque converter, transmission, wheels, tires, axles, gears, driveshafts, induction system, exhaust system and additional weight (i.e., bumpers, racks, etc.) can have a significant impact on your vehicle's calibration and may require modifications to our calibration as supplied. While we attempt to minimize the need for modifications during our development process, it is impossible for our team to account for all possible build variations/combinations, and, in some cases, it may be necessary for you to supply an additional element of customization for your vehicle—custom calibration—and to work, at your own direction and expense, with a local service facility to address your unique combination of hardware and make calibration adjustments as necessary. Please be aware that standard product warranties and governmental emissions certifications are predicated on stock vehicle configurations, and vehicle modifications and calibration changes may void both supercharger and powertrain warranties and emissions certification status (such as CARB emissions certification). Supercharger systems are only certified emissions legal when used on stock vehicle configurations with the correct Magnuson calibration. It is the sole responsibility of the customer making a warranty claim to prove that any vehicle modifications and calibration changes were

within warranty. It also is the sole responsibility of the customer to determine if the modifications and changes comply with all local, state, and federal emissions standards.
