CLASSE 9 – CLASSE 10: CAPACITIVE LEVEL BOARD vs RESISTIVE LEVEL SENSOR

The board for the capacitive level sensor is no longer available due to technological obsolescence.
The new kits with the probe and cable available for Classe 10 and Classe 9 are:

- **10701952** C9 Level Sensor Retrofit Kit
- **10701953** C10 Level Sensor Retrofit Kit

Once the resistive sensor has been fitted in the boiler, it must be connected to the J8-SL connector on the coffee keypad; to activate the sensor, go into the SETUP menu in the technician's programming menu and select:

- RESISTIVE SENSOR for Classe 9
- LEVEL INDICATOR PROBE for Classe 10
