

You're almost done!

Thanks so much for your purchase! We've already assembled most of the table. You just have to connect the legs.

WHAT'S INCLUDED

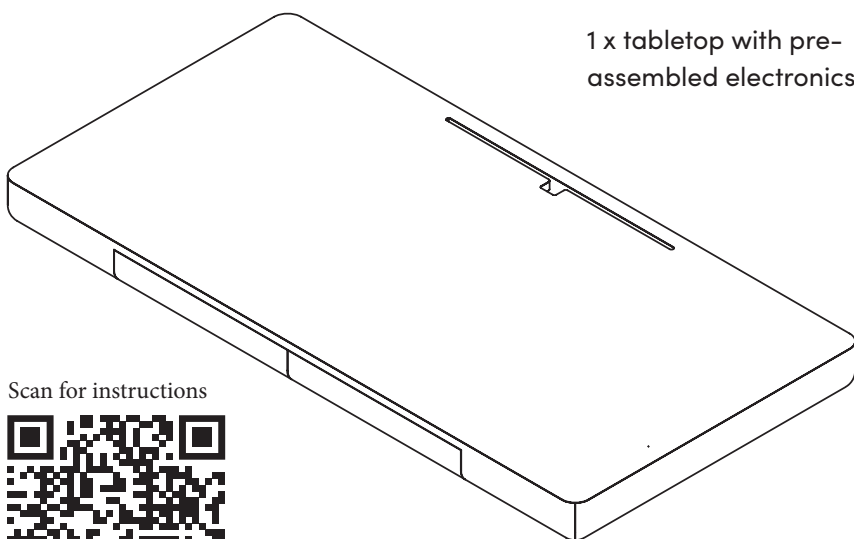

4 x table legs

1 x hex key

16 x screws

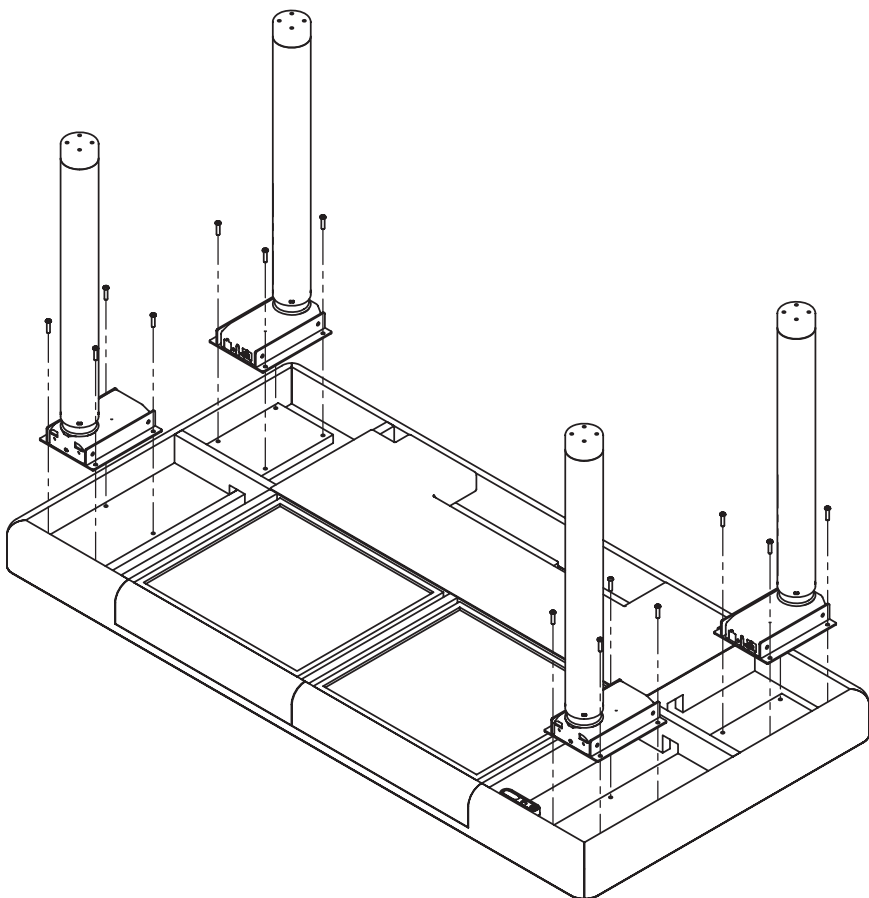

1 x tabletop with pre-assembled electronics

Scan for instructions

INSTRUCTIONS

1. Place the tabletop upside-down on the ground on top of a blanket, carpet, or the foam sheet it was shipped in to prevent the surface from being scratched.
2. Attach the table legs to the tabletop with the provided screws and holes.
3. Connect the control cables to the legs (they look like ethernet cables). Push any excess cable into the storage compartment so there's little slack.

4. Plug in the power cord to a power outlet.
5. To initiate the electronics, press the down button for a few seconds until the legs move up and down.
6. With the legs all the way down and the drawers secure, flip the table right-side-up. The table's ready to go!

SETTING PRE-SET HEIGHTS

1. Adjust table to the desired height.
2. Press the memory icon (either S or M) and then one of the three shortcut buttons (1, 2, or 3) to store the position.
3. Press the shortcut button to set the table at that height.

WOOD CARE TIPS

- Protect wood from hot surfaces and moisture. Use coasters.
- Reapply wax when wood starts to look dull. If you notice the wood getting dull over the years, you can reapply a light layer of food-safe wax (like Howard's Wax).

CABLE MANAGEMENT TIPS

- Attach a power strip with at least 4-5 outlets (or one for each of your electronic devices plus one more to power the table) underneath the table using industrial-strength double-sided tape. Make sure you don't obstruct the slot where cables come down from the tabletop. Plugging in the power strip will then power the table and all your electronics.
- Tuck excess cables into the metal tray on the sides. Use provided velcro cable wrappers to shorten the cable so there's no slack.
