## **GAS TANK COVERS**

### **DIAMOND PLATE / STEEL**

All “GAS TANK COVERS” are designed to be placed over the existing factory metal gas tank support.

- 
- 1) Be sure that your original cover is in good repair before installing your Gas Tank Cover. A little gas tank work may be needed.
  - 2) Your Gas Tank Cover uses existing bolts that secure your existing factory tank in place. The small holes in your new cover are the only mounting points. The larger holes are for clearance only. Remove the bolts from your stock tank cover that correspond to the small holes in your new cover.
  - 3) Work your new cover in over the existing cover and reinstall using the bolts that you removed. Tighten to factory specifications.

**CONGRATULATIONS!** You have finished your installation. Enjoy your new Warrior Products Gas Tank Cover and be sure to look for other quality Warrior Products for your vehicle.

**Thanks for purchasing Warrior Products!**
