Details

Target Description	Glutelin type-A 2 (GluA2) , also called GRIA2, GLUR2, GLURB, GluA2, GluR-K2, HBGR2 or glutamate ionotropic receptor AMPA type subunit 2, is a member of the Glutamate receptor family of the mammalian brain. This neurotransmitter receptor subunit, which is activated during normal central nervous system fuction, is encoded by the GRIA2 (or GLUR2) gene. GluA2 constitutes a key subunit that regulates AMPA receptors. AMPA receptors lacking of Glua2 have been shown to be present in diseased brains, whose basic fuctions have been altered.
Specificity	Does not cross-react with GluA1/GluR1, GluA3/GluR3 or GluA4/GluR4 (based on KO validation results)
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
