Details

Target Description	Potassium voltage-gated channel subfamily A member 5 or Kv1.5 is encoded by the gene KCNA5. Kv1.5 is a potassium channel subunit is a member of the potassium channel, voltage-gated, shaker-related subfamily. Potassium channels form homotetrameric and heterotetrameric channels in the membrane with various other related proteins, including KCNA2, KCNA4, KCNA5, KCNA6, KCNA7. Kv1.5 is expressed in heart, including the atria and ventricles. Kv1.5 channels are also expressed in many other organs, such as pulmonary arteries, brain, skeletal muscle. Diseases associated with KCNA5 include Familial Atrial Fibrillation and insulinoma.
Specificity	No cross-reactivity reported
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
