Details

Target Description	Potassium voltage-gated channel subfamily A member 6 or Kv1.6 is encoded by the gene KCNA6. Kv1.6 is a potassium channel subunit is a member of the potassium channel, voltage-gated, shaker-related subfamily. Potassium channels form homotetrameric and heterotetrameric channels in the membrane with various other related proteins, including KCNA2, KCNA4, KCNA5, KCNA6, KCNA7. Kv1.6 is expressed in brain neurons as well as other cell types in the brain, in cardiac and smooth muscle tissue, ovary and testis.
Specificity	Does not cross-react with other Kv1 channels
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
