Details

Target Description	Synapse-associated protein 97, Discs Large MAGUK Scaffold Protein 1 or SAP97 is encoded by the gene DLG1. SAP97 is a member of the MAGUK (membrane-associated guanylate kinase) protein family. It is a multi-domain scaffolding protein which serves to recruit receptors channels and other signaling molecules to the plasma membrane. SAP97 is expressed in heart, lung, epithelial cells and brain. SAP97 may have a role in septate junction formation, signal transduction, cell proliferation, synaptogenesis and lymphocyte activation. Diseases associated with DLG1 include Mayer-Rokitansky-Kuster-Hauser Syndrome and Depression.
Specificity	No cross-reactivity against PSD-95, Chapsyn-110 and SAP102 expressed in transfected cells
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
