Details

Target Description	PRKCA-binding protein or PICK1 scaffold is encoded by the gene PICK1. PICK1 is a scaffold protein which acts as an adaptor protein that binds and organizes the location of membrane proteins. Functions to cluster receptors and plays a role in synaptic plasticity. PICK1 is ubiquitously expressed and found in high levels in brain and testis. Cellularly, PICK1 is found at perinuclear region, mitochondria and synapses. Diseases associated with PICK1 include Spermatogenic Failure and Depression.
Specificity	No cross-reactivity reported
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
