Details

Target Description	Transient receptor potential cation channel subfamily V member 3 or TrpV3 is encoded by the gene TrpV3. TrpV3 is a member of the transient receptor potential cation channel family. TrpV3 is thought to function in a variety of processes, including temperature sensation and vasoregulation. This channel is activated at temperatures between 22 and 40 °C. TrpV3 is found at the membrane in the CNS, PNS and skin where it acts as a transducer of thermal stimuli. Diseases associated with TRPV3 include several types of Keratoderma.
Specificity	No cross-reactivity reported
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
