Details

Target Description	Solute carrier family 12 member 5 is encoded by the gene SLC12A5 and belongs to the SLC12 family of cation-coupled chloride transporters. SLC12A5 is an integral membrane K-Cl cotransporter that mediates electroneutral potassium-chloride cotransport in mature neurons and is required for neuronal Cl ⁻ homeostasis. Diseases associated with SLC12A5 include Early Infantile Epileptic Encephalopathy 34 and Idiopathic Generalized Epilepsy 14.
Specificity	Does not react with KCC1, KCC3 or KCC4
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
Storage	Aliquot and store at ≤ -20°C for long term storage. For short term storage, store at 2-8°C. For maximum recovery of product, centrifuge the vial prior to removing the cap.
