Details

Target Description	Voltage-dependent L-type calcium channel subunit beta-4 or Cav β4 is encoded by the gene CACNB4. Cavβ4 is a cytoplasmic subunit of voltage-sensitive calcium channels. These channels facilitate entry of calcium ions into excitable cells and are involved in a variety of calcium dependent processes, including neurotransmitter release, muscle contraction, and gene expression. Cav β4 is expressed predominantly in the brain (cerebellum) and kidney. Diseases associated with this gene include Episodic Ataxia, Type 5 and Epilepsy.
Specificity	No cross-reactivity against rat Cavβ1b, Cavβ2a, and Cavβ3 in transfected cells
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
