Details

Target Description	Synapse-Associated Protein 102, Disks large homolog 3(DLG3) or SAP102 MAGUK scaffold protein is encoded by the gene DLG3. SAP102 is a member of the MAGUK (membrane-associated guanylate kinase) protein family. SAP102 can bind to a number of adhesion molecules and receptors, including NMDA receptors and acts as a scaffold protein to mediate synaptic signaling. This protein plays a role in learning and memory and appears to be required for learning. Mutations in this gene have been associated with X-linked cognitive disability.
Specificity	No cross-reactivity against other MAGUK family members PSD-95, SAP97, Chapsyn-110
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
