Details

Target Description	PTEN Induced Kinase 1 is encoded by the gene PINK1. PINK1 is a member of the protein kinase superfamily, Ser/Thr protein kinase family. PINK1 is a serine/threonine protein kinase that protects against mitochondrial dysfunction during cellular stress by phosphorylating mitochondrial proteins. PINK1 is highly expressed in the heart, skeletal muscle, and testis. Diseases associated with PINK1 include Parkinson Disease 6, Autosomal Recessive Early-Onset and Parkinson Disease 2, Autosomal Recessive Juvenile.
Specificity	No cross-reactivity reported
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
