## Details

<b>Target Description</b>	Voltage-dependent L-type calcium channel subunit beta-2 or Cav β2 is encoded by the gene CACNB2. Cavβ2 is a cytoplasmic subunit of L type voltage-sensitive calcium channels. These channels facilitate entry of calcium ions into excitable cells and are involved in a variety of calcium dependent processes, including neurotransmitter release, muscle contraction, and gene expression. Cav β2 is expressed in heart and brain, and lung. Mutations in this gene are associated with Brugada syndrome.
<b>Specificity</b>	Does not cross-react with Cavβ1, Cavβ3, Cavβ4
<b>Purification Method</b>	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
<b>Quality Control Tests</b>	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
