## Details

<b>Target Description</b>	Inward rectifier potassium channel 4 or Kir2.3 is encoded by the gene KCNJ4. Kir2.3 is a member of the inward rectifier potassium ion channel family and plays a role in excitability of muscle cells and neurons. Kir2.3 is an integral membrane protein that is found expressed in heart, skeletal muscle, and several different brain regions including the hippocampus. Diseases associated with KCNJ4 include Long Qt Syndrome 9 and Seizures, Sensorineural Deafness, Ataxia, Mental Retardation, And Electrolyte Imbalance.
<b>Specificity</b>	No cross-reactivity against Kir2.1 or Kir2.2
<b>Purification Method</b>	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
<b>Quality Control Tests</b>	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
