Details

Target Description	Vesicular glutamate transporter 3 (VGLUT3) or Solute Carrier Family 17 Member 8 is encoded by the gene SLC17A8 and belongs to the vesicular glutamate transporter family. Vglut3 transports glutamate into synaptic vesicles at presynaptic nerve terminals of excitatory neural cells. Vglut3 is expressed in many tissues including brain, kidney and liver. In brain, it is expressed within glutamatergic neurons in the amygdala, brainstem, cerebral cortex, dorsal root ganglia, dorsal spinal cord, hippocampus, and hypothalamus. Diseases associated with SLC17A8 include Deafness.
Specificity	No cross-reactivity reported
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
