Details

Target Description	Homeobox protein DLX-1 or DLX1 is encoded by the gene DLX1 and is a member of the DLX family of homeodomain transcription factors. DLX1 is thought to function as a developmental regulator of signals from members of the TGF- β superfamily. DLX1 is found expressed in the nucleus in brain and hematopoietic cell lines. Diseases associated with DLX1 include Dental Fluorosis, Witkop syndrome and Split-Hand/Foot Malformation 5.
Specificity	No cross-reactivity reported
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
Storage	Aliquot and store at $\leq -20^{\circ}\text{C}$ for long term storage. For short term storage, store at 2-8 $^{\circ}\text{C}$. For maximum recovery of product, centrifuge the vial prior to removing the cap.
