## Details

<b>Target Description</b>	GluN2B/NR2b glutamate receptor, also known as Glutamate/N-methyl D-aspartate/NMDA receptor subtype 2B, is a member of the NMDA receptor family. NMDA receptors are expressed throughout the CNS in postsynaptic cell membranes. GluN2B is a major NMDAR subtype found in cortical and hippocampal regions of the adult brain. NMDA receptors are involved with memory and learning. Mutations in the gene encoding GluN2B are associated with autism, LennoxGastaut and West Syndromes.
<b>Specificity</b>	Does not cross-react with GluN2A/NR2A
<b>Purification Method</b>	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
<b>Quality Control Tests</b>	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
