Details

Target Description	Fibroblast growth factor 11, FHF3 or FGF11 is encoded by the gene FGF11. FHF3 is a member of the fibroblast growth factor homologous factors family (a subfamily of fibroblast growth factors.). FHF3 have a role in regulation of voltage gated sodium channels (Nav channels) and are thought to be involved in nervous system development. FHF3 is expressed in the Nervous system. Diseases associated with FGF11 include Congenital Myasthenic Syndrome 2A and Congenital Myasthenic Syndrome.
Specificity	Does not cross-react with FGF12, FGF13 or FGF14 in heterologous cells
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
