Details

Target Description	Fibroblast growth factor 12, FHF1 or FGF12 is encoded by the gene FGF12. FHF1 is a member of the fibroblast growth factor homologous factors family (a subfamily of fibroblast growth factors.). FHF1s have a role in regulation of voltage gated sodium channels (Nav channels) and are thought to be involved in nervous system development. FGF12 has been found to be expressed in the brain, eye and testis. Diseases associated with FGF12 include Early Infantile Epileptic Encephalopathy, Ebstein anomaly and Autosomal Dominant Deafness.
Specificity	Cross-reacts with FGF12b/FHF1b Does not cross-react with FGF11/FHF3, FGF13/FHF2 or FGF14/FHF4
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
