Details

Target Description Aldehyde dehydrogenase family 1 member L1 (Aldh1L1) is a member of the aldehyde

dehydrogenase family. This protein is an enzyme that catalyzes the conversion of 10-

formyltetrahydrofolate, NADP, and water to tetrahydrofolate, NADPH, and carbon dioxide. It is an astrocyte marker and also is expressed in the liver. It is proposed to play a role in regulation of cellular THF levels and inhibiting cell proliferation. Alterations in Aldh1L1 have been implicated in

Congenital Hydrocephalus

Specificity No cross-reactivity against Aldh1L2

Purification Method Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity

chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.

Quality Control Tests Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and

confirmed to stain the expected molecular weight band.

Storage

Aliquot and store at \leq -20°C for long term storage. For short term storage, store at 2-8°C. For maximum recovery of product, centrifuge the vial prior to removing the cap.
