Details

Target Description	SAPAP1 (also known as disks large associated protein 1), SAPAP2 (also known as disks large associated protein 2), SAPAP3 (also known as disks large associated protein 3) and SAPAP4 (also known as disks large associated protein 4) proteins are members of the SAPAP or DLGAP family of proteins. SAPAP proteins function as scaffolding proteins at excitatory synapses. SAPAP proteins interact with PSD95 family and Shank family proteins to anchor/target neurotransmitter receptors and signaling molecules to the postsynaptic membrane of excitatory synapses.
Specificity	Cross-reacts with other SAPAPs
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
