Details

Target Description	Neuroigin3 is encoded by the gene NLGN3. Neuroigin3 is a transmembrane scaffolding protein and cell adhesion molecule. It is involved in cell-cell interactions in neurons and in other cell types. It is expressed in many tissues, including the brain where it is located at the postsynaptic membrane and is involved in regulation of excitatory synapses, synapse formation and synaptic transmission. Mutations in this gene may be associated with autism and Asperger syndrome.
Specificity	Does not cross-react with Neuroigin-1, -2, -4 or -4*
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
Storage	Aliquot and store at ≤ -20°C for long term storage. For short term storage, store at 2-8°C. For maximum recovery of product, centrifuge the vial prior to removing the cap.
