Details

Target Description	Aldehyde dehydrogenase family 1 member L1 (Aldh1L1) is a member of the aldehyde dehydrogenase family. This protein is an enzyme that catalyzes the conversion of 10-formyltetrahydrofolate, NADP, and water to tetrahydrofolate, NADPH, and carbon dioxide. It is an astrocyte marker and also is expressed in the liver. It is proposed to play a role in regulation of cellular THF levels and inhibiting cell proliferation. Alterations in Aldh1L1 have been implicated in Congenital Hydrocephalus
Specificity	No cross-reactivity against Aldh1L2
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by IHC on either rat or mouse brain and confirmed to give the expected staining pattern.
