Details

Target Description	Mitofusin 2, or transmembrane GTPase Mfn2 (MFN2) is a mitochondrial membrane protein with GTPase activity that functions to aid mitochondrial clustering and fusion. It may also play a role in mitochondrial metabolism. It is expressed in the outer membrane of mitochondria. MFN2 is expressed in many tissues including the heart, skeletal muscle, tongue, and brain. Mutations in this gene cause Charcot-Marie-Tooth disease type 2A2, and hereditary motor and sensory neuropathy VI,
Specificity	No cross-reactivity against Mitofusin-1
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
