Details

Target Description G-protein coupled receptor kinase 6 is encoded by the gene GRK6. GRK6 is a member of the protein

kinase superfamily, AGC Ser/Thr protein kinase family, GPRK subfamily. GRK6 phosphorylates the activated forms of G-protein coupled receptors, thus initiating their deactivation. GRK6 is expressed in the brain in striatal neurons and spleen. No disorders were found to be associated

with GRK6.

Specificity Cross-reacts with GRK6B

Purification Method Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity

chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.

Quality Control Tests Each new lot of antibody is quality control tested on cells overexpressing target protein and

confirmed to give the expected staining pattern.

Storage Aliquot and store at \leq -20°C for long term storage. For short term storage, store at 2-8°C. For

maximum recovery of product, centrifuge the vial prior to removing the cap.
