## Details

<b>Target Description</b>	G-protein coupled receptor kinase 6 is encoded by the gene GRK6. GRK6 is a member of the protein kinase superfamily, AGC Ser/Thr protein kinase family, GPRK subfamily. GRK6 phosphorylates the activated forms of G-protein coupled receptors, thus initiating their deactivation. GRK6 is expressed in the brain in striatal neurons and spleen. No disorders were found to be associated with GRK6.
<b>Specificity</b>	Cross-reacts with GRK6B
<b>Purification Method</b>	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
<b>Quality Control Tests</b>	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
<b>Storage</b>	Aliquot and store at ≤ -20°C for long term storage. For short term storage, store at 2-8°C. For maximum recovery of product, centrifuge the vial prior to removing the cap.
