Details

Target Description	G protein-coupled receptor (GPCR) kinases (GRKs), are important regulators of GPCR function and mediate receptor desensitization, internalization, and signaling. Several non-GPCR proteins also serve as GRK substrates, and GRKs have been shown to have kinase-independent functions through regulation of receptors and effectors. These proteins are members of the G protein-coupled receptor kinase subfamily of the Ser/Thr protein kinase family. GRKs phosphorylate activated forms of G protein-coupled receptors to regulate their signaling.
Specificity	Cross-reacts with GRK6
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
