## Details

<b>Target Description</b>	Testis-specific chromodomain protein Y 1 and Testis-specific chromodomain protein Y 2 are encoded by the genes CDY1 and CDY2A respectively, as well as the autosomal genes known as CDYL 1 and 2 (CDY-like). These protein products contain a chromodomain, involved in chromatin binding, and a histone acetyltransferase catalytic domain. These proteins are expressed ubiquitously in tissues. Diseases associated with CDYL include Chromosome 6Pter-P24 Deletion Syndrome.
<b>Specificity</b>	Cross-reacts with CDYL1 and CDYL2
<b>Purification Method</b>	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
<b>Quality Control Tests</b>	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
<b>Storage</b>	Aliquot and store at ≤ -20°C for long term storage. For short term storage, store at 2-8°C. For maximum recovery of product, centrifuge the vial prior to removing the cap.
