Details

Target Description	Kir2.1 (KCNJ2) is a member of the inward rectifier potassium ion channel family which also includes Kir2.2 and Kir2.3. Kir2.1 is expressed in the membranes of many tissues, including heart, skeletal muscle, kidney and diffusely distributed throughout the brain. Kir2.1 has a role in cardiac excitability and has been shown to have interactions with CLG4, Interleukin 16 and TRAK2. Defects in Kir2.1 are involved with the diseases long QT syndrome type 7 (also known as andersen-Tawil syndrome), short QT syndrome 3, and Familial Atrial Fibrillation 9.
Specificity	No cross-reactivity against Kir2.2 or Kir2.3
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
