Details

Target Description	Pannexin 2 is encoded by the gene PANX2. PANX2 is a member of the pannexin family. PANX2 combines with pannexin 1 to form cell type-specific gap junctions with distinct properties. PANX2 is expressed in the eye, thyroid, prostate, kidney, liver, and central nervous system. Diseases associated with PANX2 include Oculodentodigital Dysplasia and Chronic Closed-Angle Glaucoma.
Specificity	Does not cross-react with Pannexin-1 or Pannexin-3
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by IHC on either rat or mouse brain and confirmed to give the expected staining pattern.
Storage	Aliquot and store at ≤ -20°C for long term storage. For short term storage, store at 2-8°C. For maximum recovery of product, centrifuge the vial prior to removing the cap.
