Details

Target Description	Double C2-like domain-containing protein beta or Doc2b is encoded by the gene DOC2b. Doc2b functions as a calcium sensor which positively regulates soluble NSF attachment receptor (SNARE) dependent fusion of vesicles with membranes. Doc2b binds phospholipids and may act at the priming stage of membrane fusion by modifying membrane curvature to stimulate fusion. Doc2b is expressed in pancreatic cells, endocrine cells and brain, where it is highly expressed in neurons. (Friedrich et al. Neurosci., July 2, 2008 • 28(27):6794 – 6806)
Specificity	Does not cross-react with Doc2a
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by IHC on either rat or mouse brain and confirmed to give the expected staining pattern.
