Details

Target Description	Inositol polyphosphate 5-phosphatase B is encoded by the gene INPP5B. INPP5B is a member of the inositol 1,4,5-triphosphate 5-phosphatase family. INPP5B functions in the regulation of calcium signaling by inactivating inositol phosphates. INPP5B is expressed highest in the urinary bladder. Diseases associated with INPP5B include dent disease 2, lowe oculocerebrorenal syndrome, charcot-marie-tooth disease type 4j, dent disease 1, and frontotemporal dementia and/or amyotrophic lateral sclerosis 2.
Specificity	Cross-reacts with INPP5b
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
