Details

Target Description	PEX5-related protein, Peroxisomal Biogenesis Factor 5 Like, TPR-containing Rab8b-interacting protein or TRIP8b is encoded by the gene Pex5l. It is a member of the peroxisomal targeting signal receptor family. TRIP8b is a cytoplasmic accessory subunit of hyperpolarization-activated cyclic nucleotide-gated (HCN) channels. TRIP8b interacts with the carboxyl-terminal region of HCN channels and regulates their cell-surface expression to the dendrites in many types of neurons. TRIP8b plays a role in regulation of HCN channel cyclic nucleotide kinetics. TRIP8b is expressed in the brain. Diseases associated with PEX5L include Rhizomelic Chondrodysplasia Punctata, Type 5 and Rhizomelic Chondrodysplasia Punctata, Type 2.
Specificity	Specific for exon 1b(does not react with TRIP8b isoforms containing exons 1a, 2 or 4)
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
