Details	
Target Description	Fibroblast growth factor 13, FHF2 or FGF13 is encoded by the gene FGF13. FHF2 is a member of the fibroblast growth factor homologous factors family (a subfamily of fibroblast growth factors.). FHFs have a role in regulation of voltage fated sodium channels (Nav channels) and are thought to be involved in nervous system development. FGF13 is expressed in the nervous system and other tissues. Diseases associated with FGF13 include X-Linked Congenital Generalized Hypertrichosis and Wildervanck Syndrome.
Specificity	Does not cross-react with FGF13A/FHF2A
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
