Details

Target Description	Sulfonylurea receptor 1 (SUR1), or ATP binding cassette transporter subfamily C member 8 is encoded by the gene ABCC8 and is a member of the ABC transporter super family. SUR1 acts to modulate ATP sensitive potassium channels and combines with Kir6.2 (KCNJ11). SUR1 is involved in insulin release. SUR1 has broad expression in many tissues including brain, heart, pancreas (beta cells). Diseases associated with this gene include Familial Hyperinsulinemic Hypoglycemia and Diabetes Mellitus.
Specificity	Does not cross-react with SUR2B (based on KO validation results)
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested by western blot on rat whole brain lysate and confirmed to stain the expected molecular weight band.
