| Target Description    | Kirre Like Nephrin Family Adhesion Molecule 3 is encoded by the gene KIRREL3. KIRREL3 is a member of the immunoglobulin superfamily, nephrin-like protein family. KIRREL3 is a synaptic cell adhesion molecule with multiple extracellular immunoglobulin-like domains and a cytoplasmic PDZ domain-binding motif. KIRREL3 is expressed in brain, bone marrow, and stromal cells. Diseases associated with KIRREL3 include Autosomal Dominant Non-Syndromic Intellectual Disability and Autosomal Dominant Non-Syndromic Intellectual Disability 4. |
| Specificity           | Does not cross-react with other Kirrel3 isoforms  |
| Purification Method   | Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.  |
| Quality Control Tests | Each new lot of antibody is quality control tested by IHC on either rat or mouse brain and confirmed to give the expected staining pattern.   |
