|------------------------------|---|
| Target Description | Brevican core protein, Chondroitin sulfate proteoglycan 7 or Brain-enriched hyaluronan-binding protein is encoded by the gene BCAN and is a member of the lectican family of chondroitin sulfate proteoglycans. Brevican is involved in the development and formation of the brain extracellular matrix and may be involved in malignancy of brain tumor cells. Brevican is developmentally regulated and specifically expressed in the central nervous system. Diseases associated with this gene include Low-Grade Astrocytoma. |
| Specificity | No cross-reactivity reported |
| Purification Method | Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody. |
| Quality Control Tests | Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern. |
