## Details

<b>Target Description</b>	Sulfonylurea receptor 2A (SUR2A), or ATP binding cassette transporter subfamily C member 9 is encoded by the gene ABCC9 and is a member of the ABC transporter super family. Differential splicing of the ABCC9 gene produces 2 isoforms, SUR2A and SUR2B. SUR2A forms cardiac and smooth muscle-type KATP channels with KCNJ11(Kir6.2) and is involved in regulation and activation. Diseases associated with this gene include Cantu Syndrome and Dilated Cardiomyopathy 10.
<b>Specificity</b>	Does not cross-react with SUR2B
<b>Purification Method</b>	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
<b>Quality Control Tests</b>	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
