Details

Target Description	α -2C adrenergic receptor or α -2 Adrenergic Receptor Subtype C4 is encoded by the gene ADRA2C. It belongs to the Adrenergic receptor subfamily of G-protein coupled receptors. α -2C adrenergic receptors mediate catecholamine-induced inhibition of adenylate cyclase by the action of G proteins. α -2C adrenergic is involved in the regulation of neurotransmitter release from sympathetic nerves and adrenergic neurons. α -2C adrenergic receptors are expressed in brain, kidney and heart. Diseases associated with ADRA2C include Raynaud Phenomenon.
Specificity	Does not cross-react with other adrenergic receptors (based on KO validation results)
Purification Method	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
Quality Control Tests	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.

Storage

Aliquot and store at $\leq -20^{\circ}\text{C}$ for long term storage. For short term storage, store at $2-8^{\circ}\text{C}$. For maximum recovery of product, centrifuge the vial prior to removing the cap.
