## Details

<b>Target Description</b>	$\alpha$ -2C adrenergic receptor or $\alpha$ -2 Adrenergic Receptor Subtype C4 is encoded by the gene ADRA2C. It belongs to the Adrenergic receptor subfamily of G-protein coupled receptors. $\alpha$ -2C adrenergic receptors mediate catecholamine-induced inhibition of adenylate cyclase by the action of G proteins. $\alpha$ -2C adrenergic is involved in the regulation of neurotransmitter release from sympathetic nerves and adrenergic neurons. $\alpha$ -2C adrenergic receptors are expressed in brain, kidney and heart. Diseases associated with ADRA2C include Raynaud Phenomenon.
<b>Specificity</b>	Does not cross-react with other adrenergic receptors (based on KO validation results)
<b>Purification Method</b>	Produced by in vitro bioreactor culture of hybridoma line followed by Protein A affinity chromatography and conjugation of purified mAb. Purified mAbs are >90% specific antibody.
<b>Quality Control Tests</b>	Each new lot of antibody is quality control tested on cells overexpressing target protein and confirmed to give the expected staining pattern.
